

Bella Rickshaw

Bella rickshaw is a reliable and user-friendly bike designed for professional use, with the passengers comfort in mind. The passenger bench has suspension installed. The seat suspension and the special bench design make it very comfortable to ride in the rickshaw. (Even for tall passengers)

The hood is one of the most functional and advanced hoods available on the European market.

It is designed to offer the lowest possible wind resistance. On windy or rainy days, the side and back windows protection can be installed. Also included in the hood kit is a practical fabric leg cover.

The unique hood storage fittings makes it a pleasure to work with the hood, as it is quick and easy to store.

The hood and all the side sheets are suitable for installing advertisements.

With its low centre of gravity, high payload and its superb maneuverability, it has become an obvious choice for a wide variety of companies.

Among these, taxi companies, bike rental, hotels, residential homes for elderly, distribution etc.

The Bella Rickshaw was originally developed for taxi businesses in Copenhagen.

The design objective was to offer passengers a totally unobstructed view while travelling, unable to see the pedaling driver, and it had to be practical and light without being obtrusive.

Bike rental companies have shown particular interest in this design.

Testimonial from: The Bike Rental in Skagen Express:

There are three kind of customers

- *The ones who see the bike and hire on impulse.
- *The customer who reserve the bike weeks ahead, because they want to use it for the transporting a walking-impaired family member.
- *The young entrepreneur who hires one for several weeks to run a profitable sightseeing taxi
